

OraLine®

Conveniently screens for METH, THC, OPI & COC in minutes!

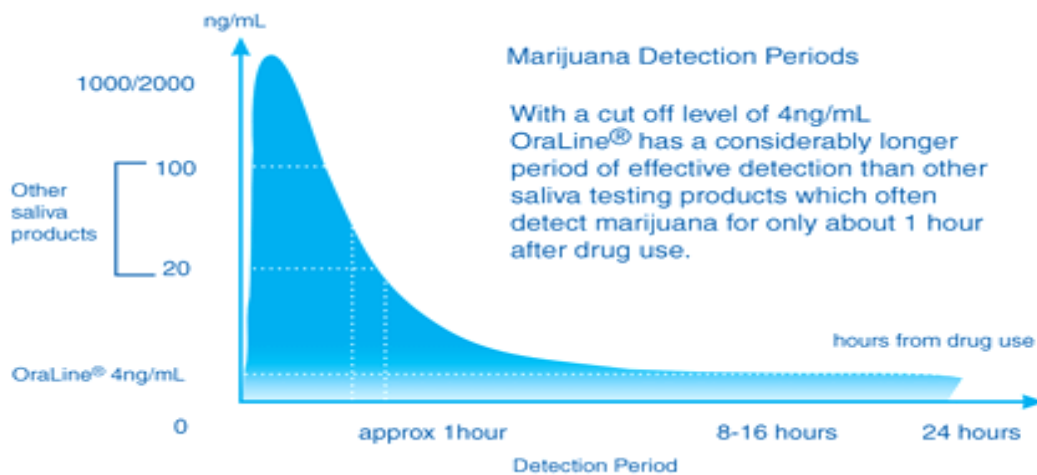

When it comes to drug screening, the OraLine product is easy to use and will save administrators substantial money and valuable time. OraLine can be used to rapidly screen for recent drug use anywhere and at anytime without the complications and expense of urine-testing products. The OraLine Screening Process is a cost effective screening approach that many are already adopting.

This leading oral fluid drug screening product has many benefits over that of urine screening as described in the following table:

Feature/Benefit	OraLine	Traditional (urine/blood/hair)
No bathroom facilities required	✓	✗
Solves 'shy bladder' issue	✓	✗
Solves gender specific supervision issue	✓	✗
Non-invasive	✓	✗
Difficult to tamper with or adulterate	✓	✗
Simple one-step process with immediate results	✓	✗
Ability to supervise multiple test subjects at once	✓	✗
Identifies relevant parent drug and metabolites	✓	✗
Screens for recent use	✓	✗

OraLine®

Clearly the convenience and time/cost savings associated with using oral fluid screening are substantial. But the most compelling reason for using the OraLine drug screen is OraLine's ability to identify recent marijuana use and its high sensitivity for other illicit drugs makes OraLine *THE MOST EFFECTIVE DETERRENT TO DRUG USE*. When regularly screening using only urine tests, there is no way to determine if the subject "used" today, yesterday or last month.

Why OraLine and not the competition?

As can be seen from the graph above, *other oral fluid drug screens* on the market are simply not sensitive enough to detect marijuana for 24 hours following use. In fact other oral fluid screens can only detect marijuana for around an hour after use and simply do not function as an effective deterrent to drug use.

Clearly the time and cost savings associated with using oral fluid screening are substantial. The most compelling reason for using the OraLine drug screen is its extended detection period for recent marijuana use and its high sensitivity for other illicit drugs which together make OraLine the most effective deterrent to continued drug abuse.
